

# CLIENT UPDATE

## TEMPORARY DISCONTINUATION OF TESTING:

### AmniSure PAMG-1 Amniotic Protein Test

**Effective July 1, 2007**

**Effective Sunday, July 1, 2007, Salem Hospital will temporarily discontinue the AmniSure PAMG-1 Amniotic Protein Test.**

The AmniSure PAMG-1 Amniotic Protein Test is temporarily discontinued due to a manufacturing issue. The manufacturer has been unable to meet the market demand, and is currently unable to fill any orders. Effective July 1, 2007, Salem Hospital does not have the AmniSure test available to perform testing. At this time the manufacturer indicates that our orders should be filled on or before July 15, 2007. We will distribute a revised update when supplies become available.

In the absence of this diagnostic tool, Fern Test, vaginal pH, and ultrasound radiography are recommended to establish the rupture of fetal membranes.
