

Salem Hospital construction update Feb. 11, 2009

Parking access gate installation, sidewalk work on Winter Street SE, asphalt overlay on Winter Street

Parking access gate installation in Center for Outpatient Medicine lot happening Feb. 13

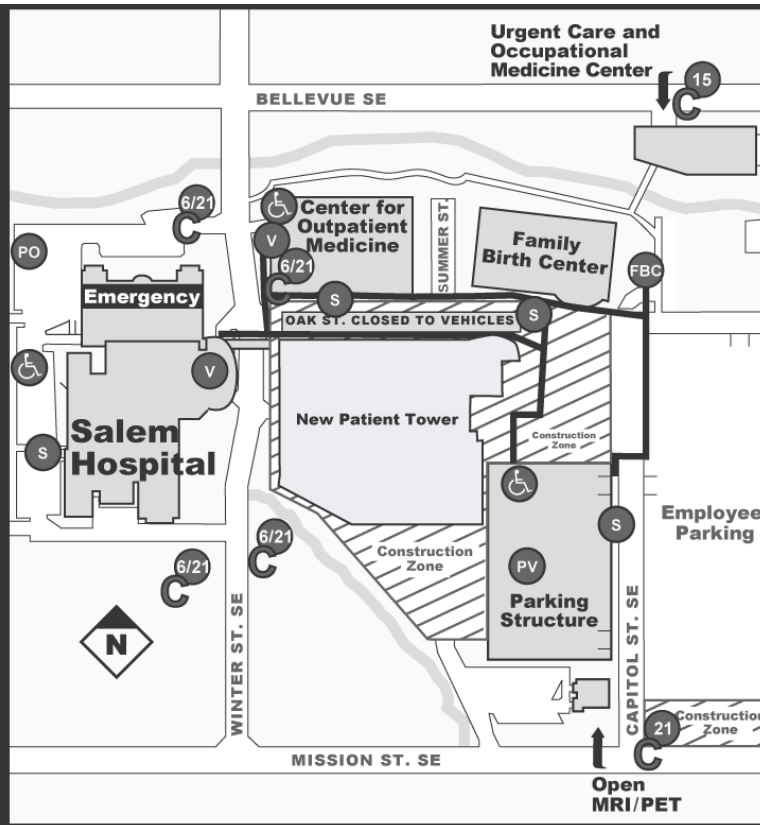

- On Friday, Feb. 13, from approximately 4 to 8 a.m., the west entrance to the Center for Outpatient Medicine parking lot will have an island installed to accommodate parking access gates.
- This is part of work continuing through about March 9 to install parking access gates for parking locations around campus. These gates will help preserve patient, visitor, and staff parking.
- Turner will pour the island in two sections and a lane of traffic will be open at all times. A flagger will be placed to direct drivers.
- The valet parking provider anticipates operating normally during this work.
- Gate arms will remain upright and the gates will be inactive until Salem Hospital's complete parking inventory is turned over to us.

Sidewalk work on Winter Street SE begins Feb. 13

- On Friday, Feb. 13, Turner will begin work to remove the temporary Winter Street SE crosswalk at the south end of the Winter Street building.
- On Friday, Turner will close the sidewalk on the west side of Winter Street SE, between Mission Street SE and the south service drive for the Winter Street Building, to remove the west crosswalk ramp and pour concrete for the sidewalk and curb. The east sidewalk will remain open to pedestrians.
- On Monday, Feb. 16, Turner will close the sidewalk on the east side of Winter Street SE, between Mission Street SE and the south service drive for the new patient-care tower, to remove the east crosswalk ramp and pour concrete for the sidewalk and curb. The west sidewalk will remain open to pedestrians.
- Signs will be placed to direct pedestrians during the work on both days.

Asphalt overlay on Winter Street SE coming soon

- Turner Construction will pour an asphalt overlay on Winter Street SE as soon as feasible. (Asphalt work needs three to five consecutive days of 45°F or warmer weather before beginning, so we may have only short notice.)
- The asphalt overlay is part of the finishing work needed to receive certificate of occupancy for the new patient-care tower.
- Turner will alternately close one lane of traffic on Winter Street SE to first grind the surface, then pour the asphalt overlay.
- Flaggers will be in place to direct traffic for the duration of this work.
